

Press Release

STEM Studio

Science Technology Engineering Mathematics

STEM Studio, a new and locally unique programme launches Sunday 25th October exploring the world of Science, Technology, Engineering and Mathematics on many different levels.

STEM Studio will be lead by two enthusiastic presenters Donna Liggins and Chris Brooks with the aim of making it educational, entertaining and all-round inspiring to young and old practitioners of the STEM community. The programme is supported by several keen volunteers from the station.

The interactive programme will showcase incredible discoveries, ground breaking innovations and engineering feats of the past, present and plans for the future. A wide range of people from the STEM world will visit the show, discussing their profession and how their work contributes to the world we live in.

TV personality Johnny Ball, who fronted several science and mathematics-based programmes is lending his support and says "Such programmes, presented in the right way are important in reaching and inspiring young people". Support and interest has also been shown by Bob Pflugfelder, Tim Hunkin, the Science Museum, IET, STEMNET and QinetiQ... and that's for starters. Local schools are showing a keen interest in this opportunity to profile the subjects to students as well as pomote their work.

STEM Studio will bring technical subjects alive through interviews with Swindon's scientists, technicians, engineers and mathematicians, as well as lots of fun filled facts, quizzes and experiments to try at home and links with schools. Listeners will be encouraged to get involved – or just listen, learn and enjoy.

The show will be live every Sunday from 1-3pm and repeated 2-4 Thursday afternoons.
